

Basic Line Follower

By Sanjay and Arvind Seshan

BEGINNER PROGRAMMING LESSON

LESSON OBJECTIVES

1. **Learn how humans and robots follow lines**
2. **Learn how to get a robot to follow a line using Color Mode on the EV3 Color Sensor**
3. **Learn how to follow a line until a sensor is activated**
4. **Learn how to follow a line for a particular distance**
5. **Learn how to combine sensors, loops and switches**

TEACHER INSTRUCTIONS

- Slides 4-7 are animated. For students to better understand how a line follower works and how a human and a robot follow a line, we recommend that you play the animation
- Give each student/team a copy of the worksheet.
- Challenge 1 begins on slide 10 and Challenge 2 on Slide 13
- Discussion Guide is on Slide 16
- More advanced students might be interested in other line followers on EV3Lessons.com

FOLLOW THE MIDDLE?

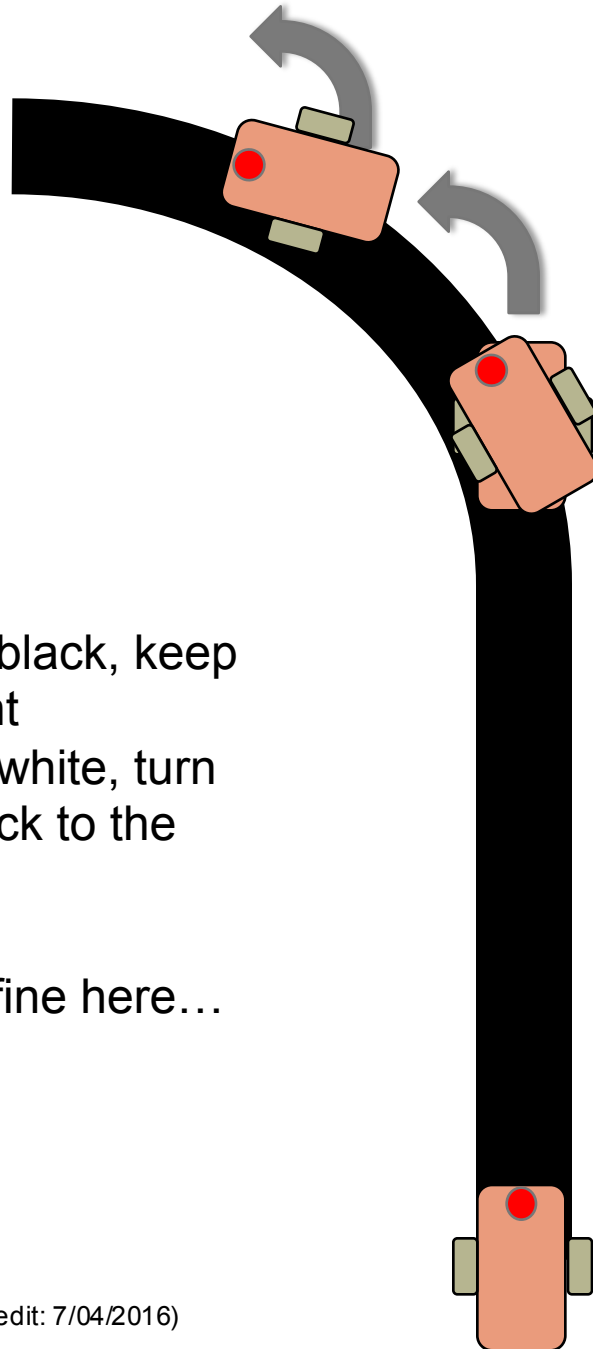

Humans want to follow the line in the middle.

Let's have the robot do the same thing using the **Color Sensor**

What type of questions can we ask using this sensor

- Are you on line or not?

1. If we are on black, keep going straight
2. If we are on white, turn left to get back to the line

Seems to work fine here...

1. If we are on black, keep going straight
2. If we are on white, turn left to get back to the line

OH NO... my robot is running away....

When the robot leaves the left side of the line, the program no longer works!

LINE FOLLOWING: ROBOT STYLE

Why could the Human follow the middle?:

- They can **see ahead**.
- They can **see the whole line and its surroundings**
- They **see both sides** and which side they left

Why can't the Robot do the same thing?:

- **Can't tell right or left side of the line**
- **How do we make sure the robot always veers off on the SAME SIDE of the line?**
 - Instead of the middle, could the robot follow the “edge”?
- So now the robot will fall off only the same side.
- We will now show you how this works!

ROBOT LINE FOLLOWING HAPPENS ON THE EDGES

Left side line following

Right side line following

The robot has to choose which way to turn when the color sensor sees a different color.

The answer depends on what side of the line you are following!

STARTING THE ROBOT ON THE CORRECT SIDE

LINE FOLLOWER CHALLENGE 1

Step 1: Write a program that follows the **RIGHT** edge of a line.

Hints: If your sensor sees black, turn right. If your sensor sees white, turn left. Use loops and switches!

Step 2: Try it out on different lines.

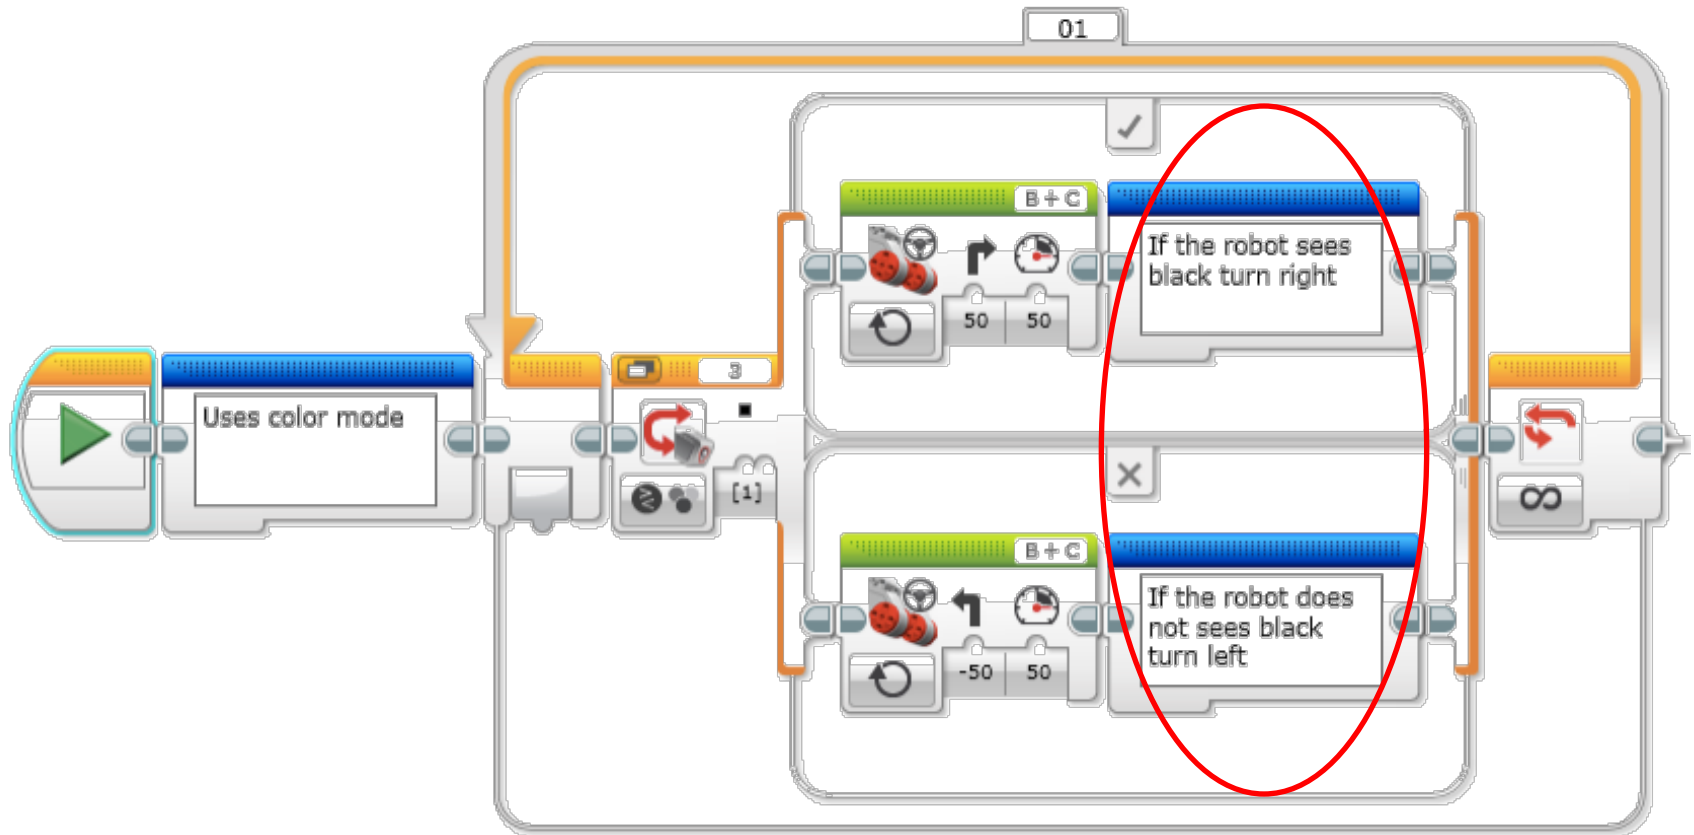

Did your line follower work the same on straight and curved lines?

Step 3: If not, instead of turn Steering = 50, try smaller values.

Is it better on the curved lines now?

LINE FOLLOWING CHALLENGE SOLUTION

Q. Does this program follow the Right or Left side of a line?

A. The robot is following the Right Side of the line.

CHALLENGE 1 SOLUTION

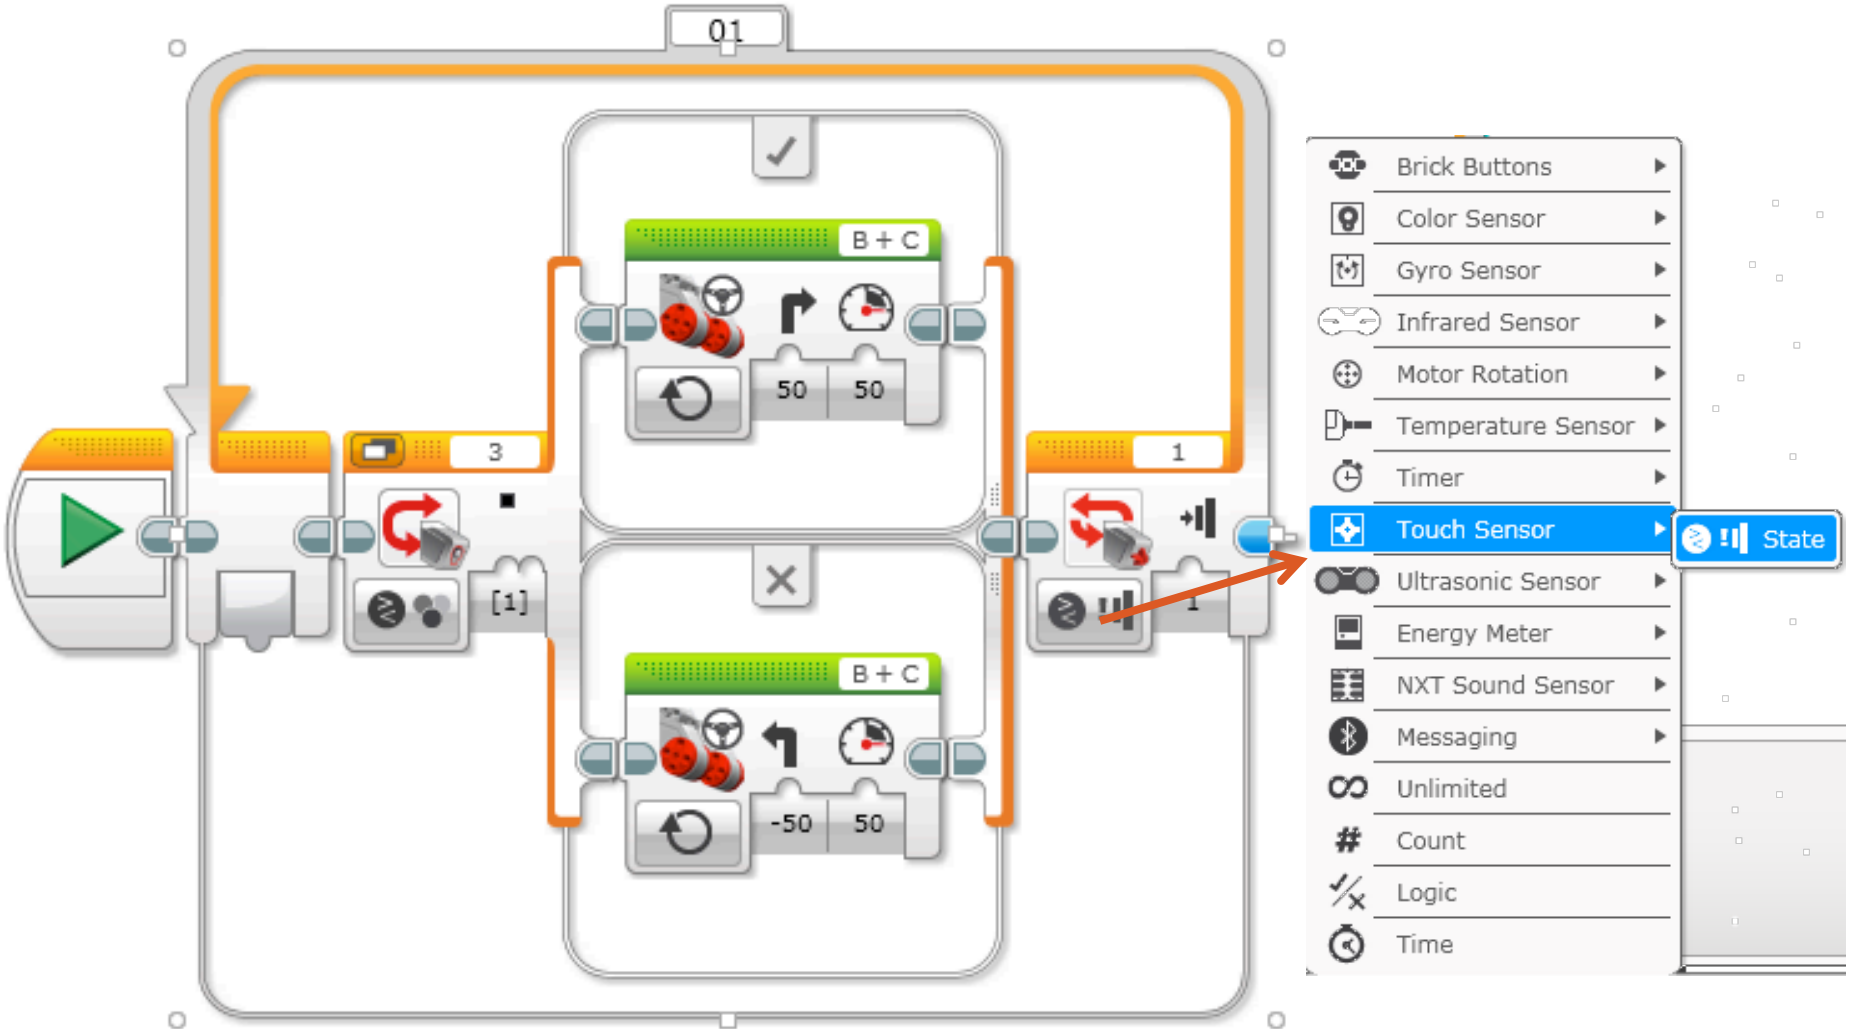

Q. This line follower goes forever. How do we make this stop?
A. Change the end condition on the loop.

LINE FOLLOWER CHALLENGE 2

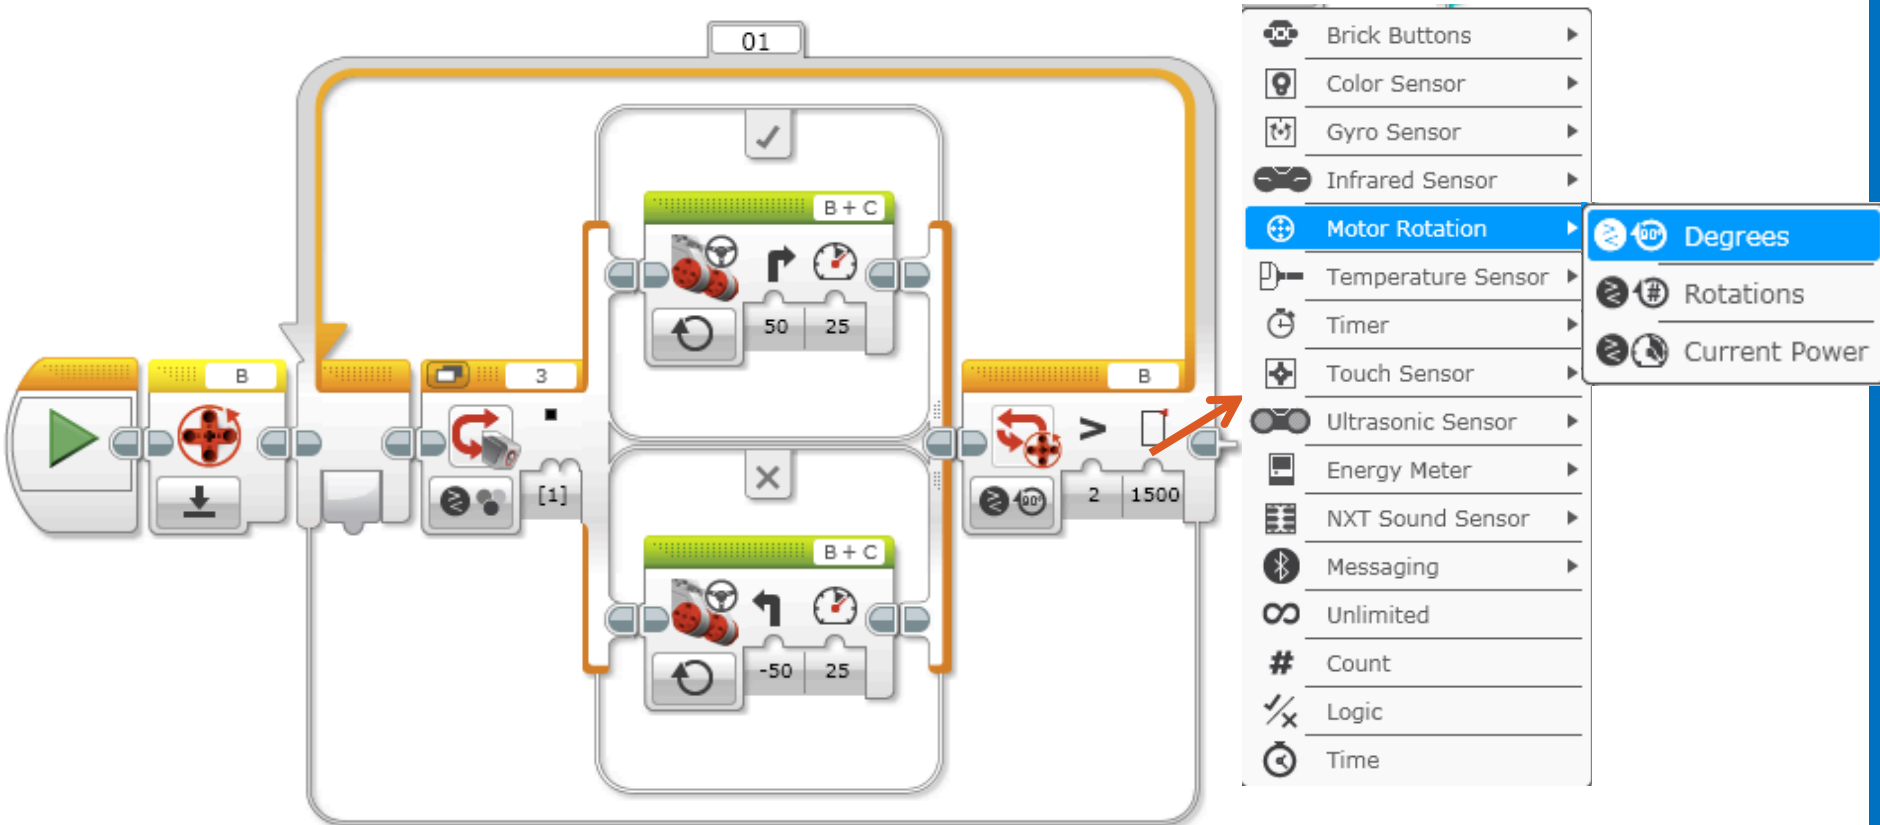

Part 1: Make a line follower that stops when you press the touch sensor

Part 2: Make a line follower that stops after it travels a particular distance

CHALLENGE 2 SOLUTION: SENSOR

CHALLENGE 2 SOLUTION: PARTICULAR DISTANCE

DISCUSSION GUIDE

Why is it important for the robot to follow the same side of the line?

The robot only knows to check if it is on or off the line.

This is a basic line follower. What are some things that were not good about this line follower? Do you think the line follower can be improved?

It wiggles a lot. Smoother line followers are described in the Advanced lessons

What sensor measures how far you have travelled?

The rotation sensor used in Challenge 2 solution measures how much the wheels have turned

How would you write a line follower that will stop when it sees a line? Or another color?

Change the loop exit condition to use the color sensor.
